

MARBLE DREAM[®]

RESURFACING KIT

The Marble Swirl Effect

The Marble Dream Swirl Effect lets you add brilliant decorative marble finishes to countertops, tables and other surfaces in just a few simple steps. Just choose the colors you want in your new surface – and let them flow with naturally stunning swirling marble beauty!

Here's how it's done...

SURFACE PREPARATION & BASE COAT

***See the reverse side of this page for preparation instructions and application of the Marble Base Coat before continuing with the following steps. **Also be sure to watch the full demo video!**

Step 1: Preparing swirl colors

To make the Marble Swirl finish take shape, you will need to pre-mix some of the kit colors with water using the cups included in the kit.

YOU WILL NEED THESE PRE-DILUTED MIXES FOR THIS PROJECT:

- 1) Glaze Coat Mix (blend 1:1 with water)
- 2) Silver/Black Vein Mix (blend 1:1 with water)
- 3) White Vein Mix (blend 1:1 with water)

Additional Tips for Success...

1) DESIRED FINAL COLOR AND TONES:

The colors you use will dictate the final look of your surface. If you want bolder swirl designs with high detail and strong contrasts, use strong contrasting colors like Silver-Black and/or White Vein mixes at 100% strength. **OR**, if you prefer more subtle contrasts and blends for a softer overall look, blend the white and black vein mixes together to desired tones that give you ideal results. ****Apply the mixes onto a base-coated test piece for color confirmation before coating everything.**

2) FRONT EDGES AND ATTACHED BACKSPASHES:

When applying glaze and vein mixes to the horizontal surface, let the coatings run over the edges/bullnoses for continuity. You can also run the rounded bottom of the enclosed spoon over edges to guide colors where you want them to flow. For attached backsplashes, use pointed tips or edges of the sea sponge (for best control and detail), or the bottom of the spoon, to add subtle vein effects that join with the horizontal design. Lightly mist with water and blow dry to soften. **Alternatively, you can lightly drizzle the diluted mixes from the top of the backsplash while vigorously blowing the liquid with your blow dryer in the direction you like for a natural, random effect.**

1 ADD PREPARED GLAZE MIX: Pour lines of prepared Glaze Mix onto the dry marble-coated surface, with dry spaces in between, to avoid oversaturating with liquid. **** See demo video for complete live presentation.****

2 ADD DILUTED VEIN ACCENT BY POURING: Pour a very small amount of your prepared Vein Mix directly onto the wet glaze lines. Add sparingly to avoid overpowering the finish with vein/accent color.

ADD DILUTED VEIN ACCENT WITH A SPOON: Add Vein Mix very sparingly with a spoon for best control (and a softer, more subtle result) directly onto the wet glaze lines.

3 MIX AND MOVE WITH A BLOW DRYER: Immediately **move and blend** the glaze and vein colors over the surface (and over counter and table edges) with a strong blow dryer for instant decorative effects. **Keep the dryer moving and DO NOT try to dry the liquid.** Stop when the liquid no longer moves easily.

4 FILL DRY GAPS: After using the blow dryer, there should be some dry gaps in the wet finish. Add a bit of diluted Glaze Mix into larger gaps. For smaller gaps, just move surrounding the wet liquid into them with the spoon.

5 ADD MORE VEIN ACCENT IF DESIRED: If you want to add more Vein Accent to the newly applied Glaze Mix, you can do so just as before. Or just leave it alone for a softer overall result that blends into the background color.

6 MIX AND MOVE WITH A BLOW DRYER: Once again, **move and blend** the fresh liquid over the surface with the blow dryer to blend everything together as one. **Keep the dryer moving and DO NOT try to dry the liquid.** **If any raised edges remain on the wet surface, softly blend them out with the bottom of the spoon and let everything settle out.**

7 MIST LIGHTLY WITH WATER: To soften the overall finish, **LIGHTLY** mist the surface with water. This will further blend everything together into a flat wet finish.

8 OPTIONAL SHARP VEIN VINES: If desired, you can use the enclosed vein tool to add some sharp vein lines into the set finish, as desired. **After the lines are added, use a quick puff of air with the dryer to "embed" them into the finish.**

9 OPTIONAL METALLIC/PEARL HIGHLIGHTS: If desired, you can also add attractive iridescent metallic and pearl highlights into the wet finish with the enclosed spoon. ****See other available Marble Dream VEIN ACCENT COLORS, sold separately for even more decorative versatility.**

10 SAND THE DRY SURFACE: After allowing the finish to dry until the following day, use the enclosed sanding pad to remove any bumps or imperfections for a smooth result. ****NOTE:** Depending on ambient temperature and humidity, the wet finish can take up to 10 hours to dry fully. **Don't touch the surface while it's wet.**

11 APPLY TWO COATS OF MARBLE CLEAR COAT: With the surface finish fully cured and any sanding dust removed, complete your Marble Dream Swirl finish with two applications of Marble Clear Coat a few hours apart – and your new Marble Dream surface is complete! Resume use the following day, with lighter use the first week.
